File to Change	Changes
`simpledb/parse/Lexer.java`	Adds a new method `eatOperator()` to consume the operators `>`, `<`, `=`, `<>`. `!=`, `>=`, `<=`
`simpledb/parse/Parser.java`	Obtains the operator that is being consumed by the `Lexer`, and passes in the operator to the `Term`.
`simpledb/query/Term.java`	Added an additional argument in the constructor, which passes in the information of the operator to evaluate the two expressions.
`simpledb/query/Constant.java`	Added two methods, `greaterThan` and `smallerThan` to compare integer and string values.
`simpledb/query/Operator.java`	Defined a new enum class that contains all the possible operators.
